

# Quick Guide

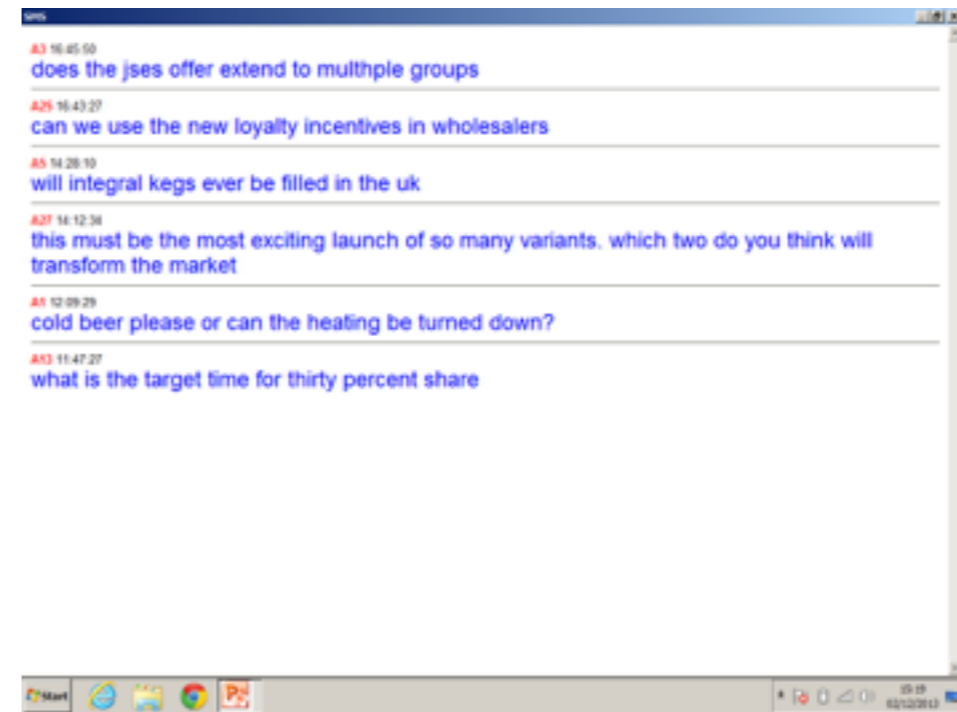

## Delete text via Keypads

How does it work?

Essentially there are three elements that make up the Deletext : SMS service. They are 'Communication', 'Moderation' and 'Display'.

'Communication' is via a text enabled audience response keypad. This allows simple text messaging capabilities with out predictive texting. The keypad transmits the text message to the Deletext Base Station. You can have 1 keypad for each delegate or you can share with 1 keypad per table.

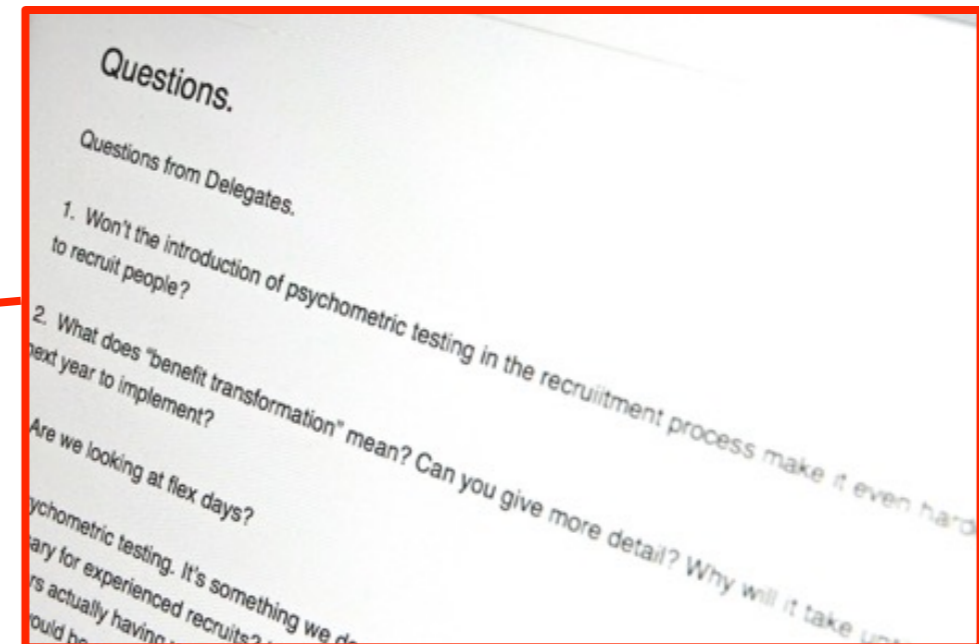

How does it work?

'Moderation' is the preview and further editing of a message before it is displayed / forwarded, this is carried out by the technician and sometimes under the eye of an appointed client representative. They preview the content for repeats, in appropriate messages and edit 'text speak' into plain English before being displayed.

How does it work?

'Display' is the presentation of the edited content on screen, monitor or iPad for the audience to see or the chair person to view privately. From here the chair person can comment to, or ask of a panel of speakers, the posed questions and comments.

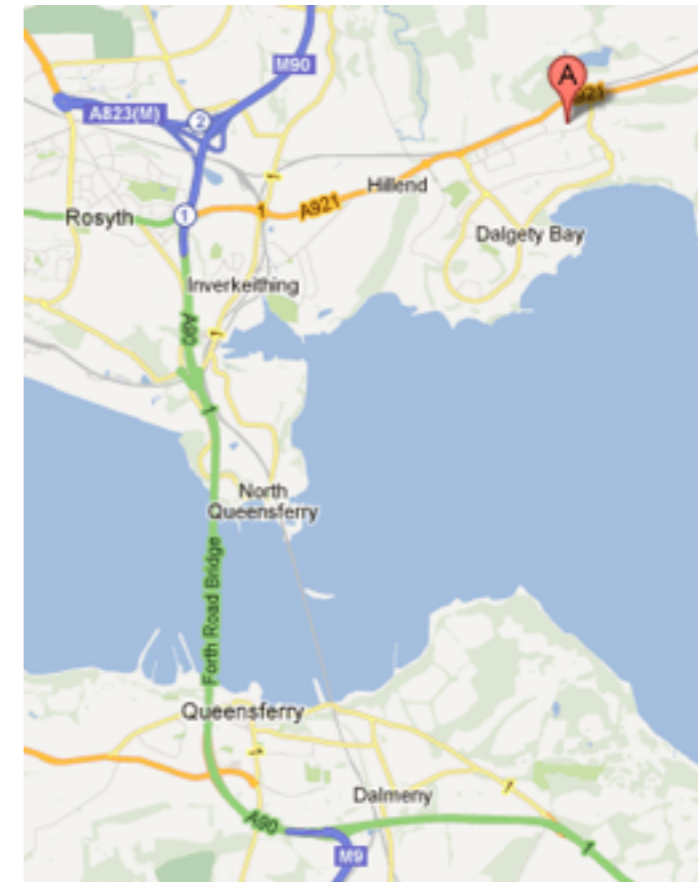

Displays can be branded to the event. The iPad can also contain additional information.
